October 23, 2026

Svatantra Microfin Limited: Rating confirmed as final for PTCs backed by microfinance loan receivables issued by Giridhar June 2026

Summary of rating action

Trust name	Instrument*	Initial rated amount (Rs. crore)	Current rated amount (Rs. crore)	Rating action	Financial Sector Regulator#
Giridhar June 2026	PTC Series A	150.00	150.00	[ICRA]AA+(SO); provisional rating confirmed as final	RBI

**Instrument details are provided in Annexure I*

#SEBI's grievance redressal/dispute resolution and SEBI investor protection mechanisms such as SCORES and ODR shall not be available for activities and instruments which fall under the regulatory purview of Financial Sector Regulators other than SEBI.

Rationale

In June 2026, ICRA had assigned Provisional [ICRA]AA+(SO) rating to Pass Through Certificate (PTC) Series A, issued by Giridhar June 2026. The PTCs are backed by a pool of a microfinance loan receivables originated by Svatantra Microfin Limited (SML) with an aggregate principal outstanding of Rs. 172.41 crore (pool receivables of Rs. 207.85 crore). SML would be acting as the servicer for the transaction.

Since the executed transaction documents are in line with the rating conditions and the legal opinion for the transaction has been provided to ICRA, the said rating has now been confirmed as final.

Pool performance summary

Parameter	Giridhar June 2026
Payout month	September 2026
Months post securitisation	3
Pool amortisation	14.98%
PTC Series A amortisation	17.21%
Cumulative prepayment rate	1.13%
Cumulative collection efficiency[1]	99.64%
Loss-cum-0+ days past due (dpd)[2]	0.58%
Loss-cum-30+ dpd[3]	0.33%
Loss-cum-90+ dpd[4]	0.01%
Cumulative cash collateral utilisation	0.00%

Transaction structure

As per the transaction structure, the monthly cash flow schedule comprises the promised interest payout. The principal is expected to be paid on a monthly basis (100% of the pool principal billed) but is promised on the final maturity date. The residual cash flows from the pool, after meeting the promised and expected payouts, will flow back to the Originator on a monthly basis. Any prepayment in the pool would be used for the prepayment of the PTC Series A principal. The transaction

[1] (Cumulative current collections and overdue collections)/(Cumulative billings + Opening overdues at the time of securitisation)

[2] Unbilled and overdue principal portion of delinquent contracts as a % of Initial pool principal

[3] Unbilled and overdue principal portion of contracts delinquent for more than 30 days as a % of Initial pool principal

[4] Unbilled and overdue principal portion of contracts delinquent for more than 90 days as a % of Initial pool principal

has certain predefined trigger events on the occurrence of which the residual cash flows would be passed on to PTC Series A investors.

The credit enhancement available in the structure is in the form of (i) a cash collateral (CC) of 6.50% of the initial pool principal, amounting to Rs. 11.21 crore, to be provided by the Originator, (ii) principal subordination of 13.00% of the initial pool principal for PTC Series A, and (iii) the excess interest spread (EIS) of 16.04% of the initial pool principal for PTC Series A.

Key rating drivers and their description

Credit strengths

Granular pool supported by presence of credit enhancement – The pool is granular, consisting of 39,282 contracts with no contract exceeding 0.05% of the pool principal, thereby reducing the exposure to any single borrower. Further, the credit enhancement available in the form of the CC, subordination and EIS would absorb some amount of the losses in the pool and provide support in meeting the PTC payouts.

No overdue contracts in the pool- The pool has been filtered in such a manner that there are no overdue contracts.

Seasoned contracts in the pool – The pool has amortised by around 23% as on the cut-off date with no delinquencies seen in any of the contracts, post loan disbursement, thereby reflecting the borrowers' relatively better credit profile.

Adequate servicing capability of the servicer – The servicer Svatantra has adequate processes for servicing of the loan accounts in the securitised pool. It has a demonstrated track record of over a decade of regular collections across multiple geographies.

Credit challenges

High geographical concentration-The pool has high geographical concentration with the top 3 states, viz. Uttar Pradesh, Karnataka and Maharashtra contributing ~64% to the initial pool principal amount. The pool's performance would thus be exposed to any state-wide disruption that may occur due to natural calamities, political events, etc. Nonetheless, the contracts are well-diversified across multiple districts with the top 10 districts constituting ~22% of the initial pool amount, which alleviates the concentration risk to some extent.

Risks associated with lending business – The pool performance would remain exposed to macro-economic shocks, business disruptions and natural calamities that may impact the income-generating capability of the borrowers and their ability to make timely repayments of their loans. The performance of microfinance loans would also be exposed to political and communal risks.

Vulnerable asset quality in microfinance sector – The microfinance sector has seen lower collections and elevated delinquencies on account of borrower overleveraging and attrition in collection teams in the past. However, portfolio collections and asset quality are better from the post guardrail book which is a source of comfort.

Key rating assumptions

ICRA's cash flow modelling for rating securitisation transactions involves the simulation of potential losses, delinquencies and prepayments in the pool. The losses and prepayments are assumed to follow a log-normal distribution. The assumptions for the losses and the coefficient of variation are considered on the basis of the values observed from the analysis of the past performance of the Originator's loan portfolio as well as the characteristics of the specific pool being evaluated. The resulting collections from the pool, after incorporating the impact of the losses and prepayments, are accounted for in ICRA's cash flow model, in accordance with the cash flow waterfall of the transaction.

For the current pool, ICRA has estimated the shortfall in the pool principal collection during its tenure at 4.25% of the initial pool with certain variability around it. The average prepayment rate for the underlying pool is modelled in the range of 3% to 9% per annum. Various possible scenarios have been simulated at stressed loss levels and prepayment rates and the incidences of default to the investor as well as the extent of losses are measured after factoring in the credit enhancement to arrive at the final rating for the instrument.

Details of key counterparties

The key counterparties in the rated transaction is as follows:

Transaction Name	Giridhar June 2026
Originator	Svatantra Microfin Limited
Servicer	Svatantra Microfin Limited
Trustee	Catalyst Trusteeship Limited
CC holding Bank	HDFC BANK LIMITED
Collection and payout account Bank	DBS BANK INDIA LIMITED

Liquidity position: Superior

The liquidity for PTC Series A is superior after factoring in the credit enhancement available to meet the promised payouts to the investor. The total credit enhancement is around 7 times the estimated loss in the pool.

Rating sensitivities

Positive factors – The sustained strong collection performance of the underlying pool of contracts (monthly collection efficiency >95%), leading to lower-than-expected delinquency levels, and an increase in the cover available for future investor payouts from the credit enhancement would result in a rating upgrade.

Negative factors – The sustained weak collection performance of the underlying pool of contracts (monthly collection efficiency <90%), leading to higher-than-expected delinquency levels and higher credit enhancement utilisation levels, would result in a rating downgrade. Weakening in the credit profile of the servicer (SML) could also exert pressure on the rating.

Analytical approach

The rating action is based on the trustee confirming compliance with the terms of the transaction and the executed transaction documents being in line with the terms initially shared with ICRA.

Complexity level of the rated instrument

Instrument	Complexity indicator
PTC Series A	Highly Complex

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: Click Here
